RE: Electrical power costs of running the new Morning View Well

Dear Reed and Ryan,

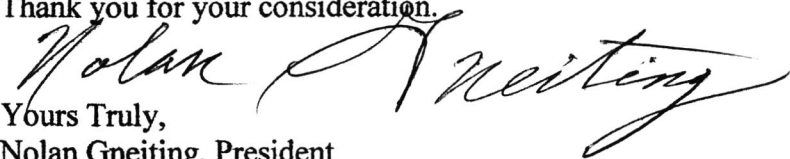

Since fall we have been very concerned that the monthly costs of running the new Morning View well are way off the projected expectations.

You have had Nelson Electric Co. come on sight to calibrate and assess the situation. However after three attempts this fall our monthly Rocky Mountain power bill is still ranging over \$1600 a month during this fall and winter season.

The second week of February, Rocky Mountain power checked their systems and the problem is not on their side.

One of the justifications of building the new well was to be energy efficient but our costs have skyrocketed. We expect high bills at the peak of the summer watering season but feel that there must be a programming, error or electrical issue that is causing the well to not run at peak efficiency.

We would like you to investigate the problem and resolve it as soon as possible.  
Thank you for your consideration.

  
Yours Truly,  
Nolan Gneiting, President  
Morning View Water Co.
